Juan Nicolás García Vega

Full-Stack Engineer | AI Agents & Web3

Bucaramanga, Colombia · Open to relocation or remote

jngv08@gmail.com · linkedin.com/in/juan-nicolas-garcia-vega · github.com/Nicolas6879

SUMMARY

Full-stack engineer (B.S. Systems Engineering, Jul. 2026) who has put **8 systems into production** at an industrial company in Colombia, including an **ISO 9001 quality system that replaced 600+ paper documents**, and who maintains the company **ERP** (about 100 users). Builds AI agents and tools (MCP, a Claude Code plugin). **Hedera Developer & Community Ambassador for Colombia**; **1st place** Web3 CTF at Hedera DevDay and **2nd place** on-chain automation bounty, ETHDenver 2026.

PROFESSIONAL EXPERIENCE

- **Software Engineer**, *Industrial company, Colombia* *Apr. 2026 – Present*
  - Lead the move to **paperless operations** end to end: I design and build the systems, including the digital-records app for scanned, filed and signed PDFs. Also restructured and completed the earlier attachments system (PDFs generated by the ERP, previously handled by hand).
  - Built an **MCP server** that lets staff search the QMS catalogs and **publish quality documents from Claude**, so people stop skipping the upload step.
  - Maintain and extend the **ERP** (Visual Basic, SQL Server), used by about **100 people**.
  - Part of the team building an internal **AI assistant** (Gemini API, moving to Claude) for company knowledge and reports.
  - Shipped **Preoperacionales** (equipment checklists in 3 branches, offline mode with auto-sync), **ComidApp** (multi-plant orders and costing), a **Power BI** dashboard hub, a third-party due-diligence form for **SAGRILAFT** (Colombia's anti-money-laundering rules) with PDF output, and a full migration of a **C#** system to Vue 3, Laravel and SQL Server.
- **Systems Engineering Intern**, *Industrial company, Colombia* *Aug. 2025 – Apr. 2026*
  - Built the **ISO 9001 Quality Management System** from scratch (undergraduate thesis), used daily by **3 departments**, replacing **600+ paper documents**. Six modules: documents, KPIs, audits, risks, CAPA and non-conformities, change management. Vue 3, TypeScript, Pinia, Laravel, MySQL.
- **Developer & Community Ambassador, Colombia**, *Hedera* *2025 – Present*
  - Organized, spoke at and judged *Descifra Hedera: Talk and Web3 Hackathon* (29 Sep. 2026, U26 Fest, Universidad Industrial de Santander): 3 hours, about **90 attendees**.
  - Ran two virtual workshops: the local kickoff of the **Hedera APEX Hackathon** for Mexico (26 Feb. 2026, 3 h), and onboarding of students from two schools in underserved communities in Brazil to the Hedera Developer Portal, to build their first dapp (27 Feb. 2026, 3.5 h, part of an inclusion program).
  - Speaker at **Blockchain Summit Latam Bogotá** (4 Nov. 2026): 1-hour workshop *Asset Tokenization and AI Agents with Control and Traceability on Hedera*, with fellow ambassador Juan Manuel Gómez.
  - Judged on behalf of Hedera at ETHOnline 2026 (about **200 projects**) and NEA Tech 2026, Argentina (about **20 projects**).
  - Onboard new developers and support builders on smart contracts and SDKs; represented Hedera at ETHDenver 2026, Hedera DevDay and Consensus Miami 2026.
- **Technical Lead**, *X-Culture Professional Association (XPA)* *2025 – 2026*
  - Built the official website (WordPress, Elementor) with payment integration and ran the technical side of international virtual events.
- **Programming Instructor & Mentor**, *Kodland* *2021 – 2024*
  - Taught **Python** to **150+ students** (ages 10 to 20) in 30+ courses.

FEATURED PROJECTS

- **Tacaño** (github.com/Nicolas6879/tacano), open-source Claude Code plugin: cuts token use by about **39%**, measured by replaying **500 real turns**. A hook asks a small model when to compact and what to hand to cheaper workers. Listed in a plugin marketplace, docs in English and Spanish.
- **Willys por Colombia** (live demo, github.com/Nicolas6879/willys-por-colombia): driving game in three.js scored live by **Google Lyria RealTime**. Music mixes by distance to each region and drifts as you drive; each region replays its theme from a fixed seed. 18 automated test suites, touch controls.

- **VerifiChain Visual** (github.com/Nicolas6879/verifichain-vision-oracle), Hedera APEX 2026 hackathon: visual inspection agent for metal and concrete (YOLOv8 with a Claude fallback). Each verdict is recorded on Hedera and certified with an NFT. Built around the needs of industrial companies in Santander.
- **x402 Guard** (github.com/Nicolas6879/x402-guard), Hedera x402 Bounty: payment proxy for AI agents. The agent holds no keys; the proxy pays only when a spending policy allows it, and every decision, approved or blocked, goes to a public audit trail (Hedera Consensus Service).
- **Hive Protocol** (github.com/Nicolas6879/HIVE), ETHDenver 2026, **2nd place** in the Hedera on-chain automation bounty: three AI agents propose, execute and validate knowledge with no human in the loop, using an MCP orchestrator and on-chain topics.
- **More:** hackathon projects ScoutBrief, Quorum Treasury, PULSO Tanda and Roast Pitch (github.com/Nicolas6879).

EDUCATION

- **Universidad Industrial de Santander (UIS)**, *B.S. in Systems Engineering* *2021 – Jul. 2026*
- **SENA**, *Technician in Industrial Electronic Equipment* *2018 – 2019*

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, PHP, Visual Basic, SQL, Solidity (also Rust, Java, C++, Go)
- **Web:** Vue 3, React, Next.js, three.js, Laravel, Node.js, REST
- **AI & Agents:** MCP, Claude Code plugins and hooks, tool calling, multi-agent systems, LLM APIs (Claude, Gemini, OpenAI), YOLOv8
- **Blockchain:** Hedera (consensus service, tokens, smart contracts), Foundry, Hardhat
- **Data & Tools:** SQL Server, MySQL, PostgreSQL, Power BI, Docker, Git, Vercel, n8n
- **Reverse engineering:** traffic analysis, Android and Flutter binaries, REA

LANGUAGES

Spanish (native) · English (intermediate, B1; improving toward B2)
